

The present work provides with the technical information to establish a national PRTR (Pollutant Release and Transfer Register). The content of this document will be the technical appendixes to the national legislation which is going to be issued to support the implementation of the Regulation EC 166/2006 of European Parliament and Council of 18 January 2006 concerning the establishment of a European Pollutant Release and Transfer Register.

Because of the introduction of a penalty system, the present work provides relevant hints to carry out the quality assessment on the PRTR reports and to fill in the "Quality assessment review", which the appointed authorities are requested to make and send to APAT.

The "Guidelines" and the "Questionnaire", which are both intended for the reporting facilities, describe the criteria for the implementation of a national system for the reporting of emissions and transfers of pollutant from industrial facilities under the new national PRTR. The national PRTR will be publicly accessible.
